Featured Installation

We were referred to Paul by his neighbor Mike, already a satisfied Cardinal Home Technologies client. Paul and Evelyn wanted to mount the TV and put their surround receiver to full use. Paul and his family already had much of the equipment they needed. They had set it up in the window of their majestic family room. All the equipment was hidden in the existing cabinet with a cooling fan and an IR extender. This allows full use of the remote while the cabinet doors are closed.

Here is how Paul described our work:

"We are very happy with the job Marc did for us installing our 63 inch plasma television above our fireplace. He was very easy to work with. He worked out a plan with us that customized exactly what we wanted, including surround sound. None of the equipment, DVD player, sub-woofer, wires or cable box are visible. It looks and sounds great and we really enjoy watching movies and sports in our new home theater!"
